

FAQ

Monkeypox

Symptoms

Flu-like symptoms

Fever

Swollen lymph nodes

Rash

WHAT DOES IT LOOK LIKE

The monkeypox rash may look like pimples or blisters. It may be painful or itchy and can be anywhere on the body.

SYMPTOMS

CAN LAST

2-4
WEEKS

Monkeypox is contagious from onset of symptoms- which may or may not include a rash.

MAY SPREAD THROUGH

- Contact with rash, scabs, or fluids
- Respiratory secretions
- Contact with infected surfaces
- Intimate skin-to-skin contact

WHAT SHOULD YOU DO IF YOU'RE EXPERIENCING SYMPTOMS

If experiencing symptoms of monkeypox, avoid close contact with others and contact your physician immediately.

HOW IS IT

TREATED

There are no approved treatments for monkeypox. Antiviral drugs and vaccines may help treat or prevent infection. Consult a healthcare provider to check vaccine eligibility.

HOW TO AVOID

Avoid direct contact with those diagnosed with monkeypox or those exhibiting symptoms of monkeypox. Avoid contact with infected objects and materials including bedding, towels, and clothing. Wash or sanitize hands often.

If you are experiencing any symptoms, please contact your physician.
